

NC3000 and NC4000... So Simple - On and Off...

A highly compact professional cleaning system, available in 4 individual styles: the NC-3000, NC-4000 and NC-3000AT, NC-4000AT.

With a range of 4 'Lock on' detachable modules for the NCs and 5 'Onboard' attachments for both the NCs and the ATs, providing exceptional versatility and practicality in a single design concept.

A major advantage of the NuClean system is the easily detachable, and conversely attachable, professional, independent mopping units

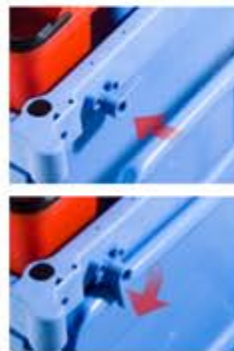

able to be used in either mode but with added manoeuvrability and usability in detached operation - especially in congested areas.

The NuClean attachment and detachment system is simplicity itself but by the unique interlocking design each arrangement is exceptionally stable and robust, be it in the attached or detached mode.

NC-3000 with NCK-100

NCK-100 Detachable Vertical 22-litre Mopping Unit.

A choice of two full mopping units and additional waste systems.

Waste Modules...
